

SoilWorx Natural Fertilisers

Dynamo

Dynamo™ is a new product primarily for use when sowing cereals or reseeding grass. Made from a blend of quality manures including chicken litter, Dynamo™ is naturally high in organic carbon, and has the full range of trace elements. Applied at sowing, Dynamo™ creates the perfect environment for the seed to develop, providing a controlled release of nutrients in the vital early stages of growth. Dynamo™ increases microbial and earthworm activity in the soil, which leads to improved soil structure and fertility. This also encourages improved root development, which will increase the plant's ability to take up nutrients, resist disease and withstand stress. Our unique manufacturing process ensures that Dynamo is guaranteed to be free of weed seeds & pathogens.

Typical Analysis*	
Nitrogen	36 kg (72 units) per tonne
Phosphorus	20 kg (40 units) per tonne
Potassium	30 Kg (60 units) per tonne
Calcium	63 kg per tonne
Magnesium	6.2 Kg per tonne
Sulphur	6.1 Kg per tonne
Sodium	4.1 kg per tonne
Copper	40 g per tonne
Manganese	441 g per tonne
Boron	32.1 g per tonne
Iron	0.1kg per tonne
Zinc	384 g per tonne
Molybdenum	3.55 g per tonne
Organic Carbon	41.8%
Organic Matter	72.1%

**Because Dynamo is a natural product, slight variations in analysis may occur. Figures given are average values. All values are Elemental values.*

Custom Blends:

We can create a blended fertiliser pellet to suit your soil's unique requirements, giving you all the benefits of a carbon based fertiliser, plus the added nutrients to maximise the productivity of the soil on *your* farm.
